Education

University of Michigan — Ann Arbor, MI
Bachelor of Science in Engineering, Computer Science (3.9 GPA) — *Aug 2020 – Dec 2023*

- **Awards:** Summa Cum Laude, James B. Angell Scholar, Dean's List, University Honors, Regents Scholar
- **Activities:** Theta Capital (Vice President & Treasurer), Engineering Career Fair (Chair & Webmaster), DIII Ice Hockey (2023 National Champion), Michigan Journal of Economics (Editor)

Experience

FactSet — Remote, USA

Software Engineer III — *Oct 2026 – Present*

- Lead development of a full-stack agentic platform in FactSet's new AI business unit, enabling clients to build custom AI agents or deploy FactSet-defined ones, and run them directly on proprietary in-house financial data
- Designed and implemented the platform's core capabilities: an MCP-enabled architecture with agent orchestration, agentic workflows, scheduled routines, and a run-results dashboard; now launching in beta

Software Engineer II — *Apr 2025 – Oct 2026*

- Drove the ground-up rewrite of FactSet's flagship web platform (Vue, TypeScript), embedding the FactSet AI assistant into a reimagined workflow; launched to 150,000+ daily users with 99%+ client satisfaction
- Selected by leadership as one of 6 business-unit-wide nominees for the Dealmakers & Wealth Trailblazer Award

Software Engineer I — *Mar 2024 – Apr 2025*

- Handpicked for the CEO-led task force that rebuilt FactSet's iOS and Android apps: owned the Markets tab (data and charting across all asset classes), built as shared Vue/TypeScript webviews in native Swift and Kotlin shells; shipped to 50,000+ users
- Maintained and upgraded core web platform infrastructure through nearly 2x user growth, optimizing for millisecond-level performance and workflow efficiency

Software Engineer Intern (Norwalk, CT) — *May 2023 – Aug 2023*

- Architected and developed 12 C++ REST API endpoints (3 for each of FactSet's 4 in-house and vendor portfolio optimization engines), enabling buy-side quant clients to build optimal portfolios entirely programmatically

Alignerr (Freelance) — Remote, USA

Agentic Coding Subject Matter Expert & Project Lead — *May 2024 – Present*

- Lead 20+ LLM training-data projects end-to-end for frontier AI labs: design agentic coding projects targeting observed model failure modes, author annotation guidelines, and own quality and delivery of 20,000+ data rows
- Source, calibrate, and manage labelers and reviewers; design automated QA strategies and human review layers (rubric design, gold-standard calibration, inter-annotator agreement), and audit the reviewers themselves

Gentherm — Northville, MI

Software Verification Engineer Intern — *May 2022 – Aug 2022*

- Developed a 3,400-line Vector CAPL test suite to validate internal test automation tools for automotive hardware, increasing testing efficiency by 80%
- Created and executed 200+ software/systems test cases on physical ECUs using Vector CANalyzer CAN bus simulation

Projects

Forex Visualizer & Sentiment Heatmap Analyzer | *Python, Flask, React, D3, Tailwind*

- Real-time, interactive global FX choropleth with an NLP sentiment treemap scoring earnings-call transcripts across ∼200 large-caps in 11 sectors; won Best FinTech Hack out of 486 participants at SpartaHack 9

Stock Portfolio Optimization Web Dashboard | *Python, Flask, React, pandas, SQL, Google Cloud*

- Mean-variance optimizer computing max-Sharpe portfolios via convex optimization across a 2,000-ticker universe and ∼20 years of daily prices, with a walk-forward backtester; runner-up for Best Financial Hack at MHacks 16 (357 participants)

Technical Skills

Languages: C++, C, Python, HTML, CSS, SCSS, JavaScript, TypeScript, Bash, SQL
Frameworks & Libraries: Vue, React, Node, Flask, pandas, Bootstrap, Tailwind, Vite, Vitest, pytest
Developer Tools: AWS, CI/CD, Claude Code, Docker, Git, Jira, Linux, MCP, Postman, Raspberry Pi, SQLite, VSCode
